

CONSTRUCTION OF IMPROVEMENTS AT THE TALBOT COUNTY REGION II WASTEWATER TREATMENT PLANT

The construction of the **new Enhanced Nutrient Removal (ENR) Wastewater Treatment Plant (WWTP)** on Calvert Street is progressing well and is currently on schedule. **Talbot County** greatly appreciates everyone's patience and understanding during this time.

Talbot County wishes to advise the residents along Calvert Street and Seymour Avenue of periodic increased truck traffic during the next couple of months. There will be two large concrete pours currently scheduled for the week of May 22, 2006. To allow the contractor to do this work as efficiently as possible the first concrete pour will begin approximately 6:00 am while the second pour will begin approximately 4:00 am. Again, these are single day events and should be the only early morning concrete pours during the remainder of the project.

After the above mentioned concrete pours there will be sporadic early morning deliveries of concrete panels. Again, these deliveries are necessary to move the project efficiently forward with the hope of completing the project on or ahead of schedule.

Again, your patience and understanding throughout this period is greatly appreciated.
